Jørn Bøni Hofstad

Curriculum Vitae

PERSONAL DETAILS

Birth	June 7, 1996
Phone	+47 94121127
Mail	jorn.boni.hofstad@gmail.com
Citizenship	Norwegian, Swiss
LinkedIn	www.linkedin.com/in/joern-boeni-hofstad

SKILLS

Languages	Norwegian (native), English (fluent)
	Swiss German (fluent orally, A1-A2 written), French (A2)
Software	Rust, C++, Python, Git, Docker, Jenkins, Terraform

WORK EXPERIENCE

Software Consultant 2025-present

Sopra Steria

As a consultant I, worked in an agile Scrum team to implement algorithms for trading of natural gas on the futures market, and the infrastructure needed to run the algorithms. The algorithms offloaded work from the energy traders, which are an important and limted resource for our customer. The algorithms also opened oppurtunities for greater profit. The algorithms hosted on Microsoft Azure, defined using Terraform. Both Serverless Azure Functions using Python and hosted within Azure Container Applications. I also expanded the team's solution in SQL, using SQLAlchemy, as well a monitoring solution, using Grafana and KQL. Deployment was done using GitHub Actions and Terraform.

Software tester 2023-2025

Nordic Semiconductor

I helped increase our and our customer's confidence in the tools we made for doing DFUs and resetting nRF devices using Nordic's Python testing framework. The tests were done both on FPGAs and directly on hardware. I also worked on the CI/CD system using Jenkins/Bash for building and testing. Additionally, I made the Docker images we that ran the nodes controlling to the FPGAs.

Software developer 2020-2023

Nordic Semiconductor

I developed and worked as a tester for tooling made for developing on microcontrollers on Windows, MacOS and Linux. The tools, written in Rust and C++ greatly simplified the development process of Nordic Semiconductor's customers, reducing their time to market and

. The tool greatly simplified the initial installation for our first-time users and increasing reproducibility for customer support. Additionally, I made our our dynamic completion system more usable, taking execution time from 1 second to 0.3 seconds, profiling using ProcMon and Visual Studio. I also helped on updating one of our legacy C++ projects, and set up a package registry for Rust packages using Artifactory.

Teaching assistant (TTK4240, Industrial Electronics) Fall 2017

NTNU Part-time

I assisted students in controlling an inverted pendulum using a discrete encoders and a controller using a non-linear controller they made in LabView.

Teaching assistant (TTK4115, Linear System Theory) Fall 2018
NTNU Part-time

I aided students in controlling a model helicopter using a linear multivariable regulator and a Kalman filter, both made in Matlab/Simulink.

EDUCATION

M.Sc. Cybernetics and Robotics 2015-2020
Norwegian University of Science and Technology (NTNU), 3.8/5 GPA
Exchange semester Spring 2019
École Polytechnique Fédérale de Lausanne (EPFL)
